Markdown for lists	2
Subsection	2

markdown_extensions: - admonition

#Section This is our first section.

Another paragraph.

We can use Markdown for figures.

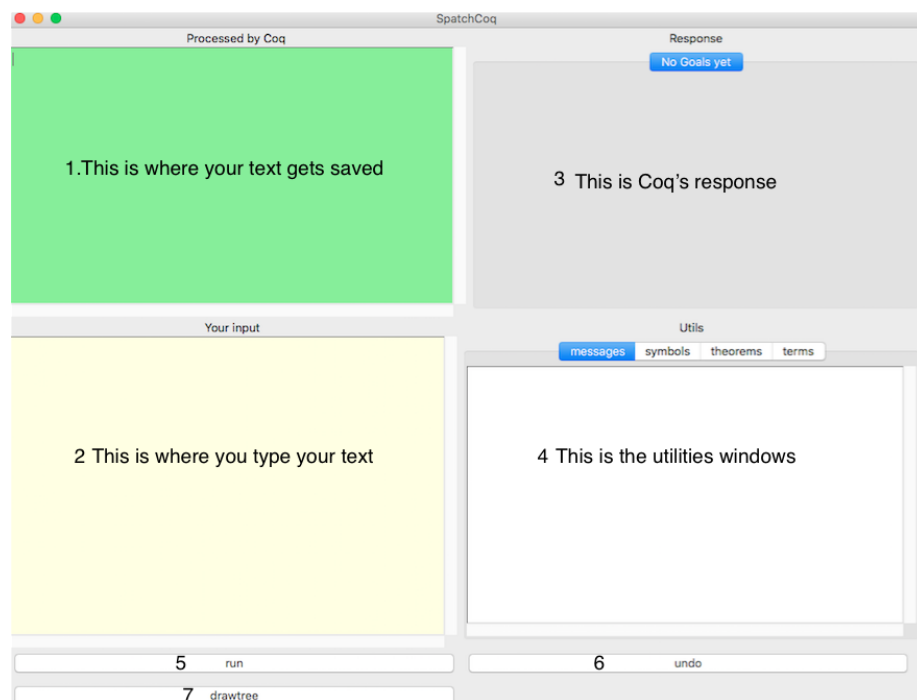

Figure 1: A Markdown logo

!!! note

This is a note.

I'm an inline-style link

I'm an inline-style link with title

I'm a reference-style link

I'm a relative reference to a repository file

You can use numbers for reference-style link definitions

Or leave it empty and use the link text itself.

URLs and URLs in angle brackets will automatically get turned into links. `http://www.example.com` or `<http://www.example.com>` and sometimes `example.com` (but not on Github, for example).

```
s = "Python syntax highlighting"
print s
```

Some text to show that the reference links can follow later.

Markdown for lists

- One
- Two
 - Nested one
 - * nested 3
- Three
 1. Numerated list
 2. No need to specify number

NOTE

It works with almost all markdown flavours (the below blank line matters).

We can even inline math: $y = ax + b$.

<hr/>	
	
Table multiline text bla bla bla bla bla bla bla bla bla bla bla ... the blank line below is important	
<hr/>	

How about displayed equations:

$$y = -2.2x + 0.5$$

Subsection

Just use Markdown to define sections and structure of the document.

Let's finish with a footnote.¹

¹I'm a footnote!
